**MAGRANN ASSOCIATES IS MAKING BUILDINGS BETTER FROM NEW ENGLAND TO THE  
CAPITAL REGION**

MOUNT LAUREL, NJ – MaGrann Associates has expanded their mission to make buildings better into the New England housing market through a strategic acquisition of Home Energy Technologies of Chester, Connecticut. As a part of MaGrann Associates, Home Energy Technologies strengthens the two companies' shared mission of making buildings more resource efficient, healthy, and affordable. MaGrann Associates, a long-established energy consulting company headquartered in Mt. Laurel, New Jersey is working through the COVID-19 crisis to expand and strengthen their services using a strategic focus on partnership and innovation.

This merger offers New England building owners and developers turnkey services for all phases of high performance multifamily development, renovation and asset management. *"Clients can now work with us in delivering permit drawings all the way to certification and occupancy for existing as well as new construction. This can really simplify the process for our clients and bring multiple services all under one roof"* said Peter Harding, Home Energy Technologies Founder.

*"We're really thrilled to strengthen our mission and value to clients through this growth. Our shared roots with Home Energy Technologies serving on the Board of NEHERS (the Northeast Home Energy Rating System Alliance) has given us the foundation for a strong future together"* added Rich Selverian, MaGrann President and CEO.

Despite the challenges so far in 2020, MaGrann has partnered on rapid response efforts to provide safe housing needs during the COVID-19 crisis. MaGrann is a team member of the Modular Mobilization Coalition, a nationwide group of modular housing manufacturers providing a solution for the healthcare facility shortage in America today. The coalition will produce thousands of individual standardized Supplemental Care Units (SCUs) each week to fast-track construction of much needed field hospitals across the country. After the crisis ends, these units will be modified as an innovative, long-term solution to help address the chronic shortfall in homeless, veteran and affordable housing. MaGrann is providing engineering and resiliency support to deliver these safe and resilient homes in response to the medical crisis of today and permanent housing needs of the future.

MaGrann Associates is a building science consulting firm focused on providing engineering, sustainability and program implementation support for a variety of client types. For more than 35 years, we have brought applied building science to the residential housing market to help builders, developers, designers and property owners produce high performing, risk averse, resilient places to live. A 2020 ENERGY STAR Sustained Excellence winner, we are a diverse group of experts dedicated to helping you meet your project goals.
